

PROFILE

Second-year Computer Science student at FAST NUCES Lahore, specializing in backend development and AI-assisted engineering workflows. Currently a Backend AI Engineering Intern at FlyRank AI, building and securing REST APIs with Node.js, Express, PostgreSQL, and Supabase. Independently designed and built a full-stack gym management SaaS product after identifying an operational gap for small gym owners.

EXPERIENCE

FlyRank AI - Backend AI Engineering Intern <i>Lahore, Pakistan (Remote)</i>	<i>July 2026 – Present</i>
- Built a secured REST API in Node.js and Express with 6 endpoints covering sign up, log in, log out, and both public and token-protected routes, using Supabase as the identity provider. - Implemented JWT verification and a reusable authentication middleware function, applied across multiple protected routes instead of duplicating auth logic per endpoint. - Documented the API in Swagger UI with bearer token authorization, and containerized the PostgreSQL database layer with Docker. - Completing parallel coursework in AI-assisted development workflows, agent versus workflow design, and MCP-based tool integration as part of a structured internship curriculum.	
Syntexhub - Backend Developer <i>Lahore, Pakistan</i>	<i>June 2026 – July 2026</i>
- Built a REST API for user account management in Node.js and MongoDB, covering full CRUD functionality: create, read, update, and delete. - Structured routes, models, and error handling following standard backend development conventions.	

PROJECTS

X-Fitness GMS - Gym Management SaaS <i>React, Vite, Supabase — Full-Stack</i>	<i>2026</i>
- Identified an operational gap in how small gyms manage day-to-day operations and independently designed and built a gym management system for a real gym client in Johar Town, Lahore. - Implemented 4 core modules: QR-based member check-in, member management, trainer payroll, and revenue tracking. - Used Supabase for authentication and data storage, with a React and Vite frontend.	
Task API with Supabase Authentication <i>Node.js, Express, PostgreSQL, Docker, Swagger</i>	<i>2026</i>
- Built a 7-route REST API for task management with full CRUD functionality, backed by a PostgreSQL database running in Docker. - Added a 6-endpoint authentication layer using Supabase Auth, including JWT verification and reusable middleware, on top of the existing CRUD API. - Documented all endpoints in Swagger UI with bearer token authorization support.	
MediCore - Hospital Management System <i>Object-Oriented Programming — C++, SFML</i>	<i>2026</i>
- Built a hospital management system in C++ with SFML for UI rendering, applying core OOP principles: inheritance, polymorphism, encapsulation, and composition. - Implemented the Singleton design pattern and bidirectional object consistency.	

SKILLS

Backend: Node.js, Express.js, REST API design, JWT authentication, Supabase, MongoDB
Data & Infra: PostgreSQL, Docker, Swagger / OpenAPI, Git & GitHub
Languages: JavaScript, C++, HTML / CSS
AI Tools: Claude Code, AI-assisted development workflows, MCP-based tool integration

EDUCATION

National University of Computer and Emerging Sciences (FAST NUCES) <i>BS Computer Science - Lahore, Pakistan</i>	<i>Aug 2025 – May 2029</i>
Government College University (GCU) <i>Intermediate - Lahore, Pakistan</i>	<i>2023 – 2025</i>

VOLUNTEERING

Reception Officer - SOFTEC'26 <i>FAST NUCES Lahore</i>	<i>2026</i>
Volunteered at one of Pakistan's largest university tech events, managing guest reception, registration coordination, and on-ground front desk operations.
